

# HotelTrack

## Hotel Owner Guide

*Your simple guide to understanding  
your hotel's marketing performance*

### **Welcome to HotelTrack.**

This guide will help you read your dashboard and understand what each number means for your business — in plain English, no jargon.

Updated to cover all the latest features: Performance Summary, Revenue by Source, OTA Savings, Visitor Journeys, Funnel Analysis, Influencer Performance, Channel Filtering, and more.

# What's Inside

1. Welcome — What is HotelTrack?
2. Your Dashboard at First Glance
3. The Performance Summary
4. Performance Overview KPI Cards
5. Where Your Bookings Come From
6. Commission Saved vs OTAs

8. The Booking Funnel
9. Switching Between Marketing Channels
10. Influencer Performance
11. Reaching Your Agency
12. Your Weekly Routine
13. Frequently Asked Questions
14. Closing

# 1. Welcome — What is HotelTrack?

Your marketing agency uses HotelTrack to show you exactly how your hotel is performing online — how many people visit your website, where they come from, which Instagram posts and ads bring real bookings, and how much revenue you're generating from direct channels.

Think of HotelTrack as a window into the work your agency is doing for you. Instead of trusting that the marketing is working, now you can see it.

## What HotelTrack Shows You

- **Revenue:** how much money your direct bookings generated
- **Source:** which marketing channel drove each booking — Instagram, Google, ads, influencers
- **Savings:** how much commission you didn't pay to OTAs
- **Visitor behaviour:** what people did on your website before booking — or before leaving
- **Trends:** are things improving, stable, or slipping?

## What HotelTrack Does NOT Do

HotelTrack is not a booking system. It does not take bookings, send emails, or manage your inventory. It is a tracking and reporting tool — it watches what's happening across your marketing channels and tells you the story in one place.

**You don't need to do anything technical to use HotelTrack. Your agency has already set everything up. You just need to know how to read the dashboard — which is what this guide is for.**

## 2. Your Dashboard at First Glance

When you log in and open your hotel's dashboard, you'll see several sections stacked from top to bottom. Don't be overwhelmed — you don't need to read everything every time.

Most days, you only need to glance at the top section (the Performance Summary). The rest is there when you want to dig deeper.

### The Sections You'll See

|                                 |                                                                                       |
|---------------------------------|---------------------------------------------------------------------------------------|
| <b>Performance Summary</b>      | A 3-4 line plain-English summary of how things are going. Read this first.            |
| <b>Performance Overview</b>     | Quick number cards: revenue, bookings, ad spend, ROAS, conversion rate, device split. |
| <b>Channel Filter Dropdown</b>  | Switch between 'All Channels' and individual channels (Meta Ads, Instagram, etc.).    |
| <b>Revenue by Source</b>        | Breakdown of where your money came from — Instagram, Google, direct, etc.             |
| <b>Visitor Journeys</b>         | Real visitor sessions you can click into to see what they did on your website.        |
| <b>Funnel Analysis</b>          | Where visitors drop off between landing and booking.                                  |
| <b>Commission Saved vs OTAs</b> | How much money your direct bookings saved you in OTA commissions.                     |
| <b>Influencer Performance</b>   | If your agency runs influencer campaigns, this shows their results.                   |
| <b>Contact Agency</b>           | A button at the bottom to reach your agency quickly when you need them.               |

**Tip:** Spend two minutes a day reading just the Performance Summary. Once a week, scroll through the whole dashboard. That's enough to stay on top of things.

### 3. The Performance Summary

At the very top of your dashboard is the Performance Summary — a short paragraph that tells you, in plain language, how your hotel is doing.

#### What it looks like

*"Last 7 days were strong — ■2.4L across 12 bookings, up 18% from the week before. Instagram drove your top revenue (■1.1L from 5 bookings). Keep doing what's working."*

The summary changes based on how things are going. If bookings are up, it'll sound positive. If bookings dropped, it will say so honestly and suggest what to focus on — no sugar-coating.

#### The Toggle: Yesterday, 7 Days, 30 Days

Right next to the summary, you'll see three buttons: **Yesterday**, **Last 7 days**, and **Last 30 days**. Click any to see the summary for that time period.

- **Yesterday** — quick check, useful for spotting big single-day changes
- **Last 7 days** — the standard weekly view (this is the default)
- **Last 30 days** — the bigger picture, monthly trend

Don't react too strongly to a single bad day. One-day numbers swing a lot. The 7-day and 30-day views are more reliable indicators of how things are really going.

## 4. Performance Overview KPI Cards

Below the summary, you'll see a row of cards showing the most important numbers. These are KPIs — Key Performance Indicators. Don't worry about the term; just know these are the numbers that matter most.

### Direct Booking Revenue

Total money from bookings made through your own website (not OTAs). The main number to watch — it's the revenue your marketing is generating directly.

### Number of Direct Bookings

How many bookings happened on your website. Useful to see if the issue is volume (fewer bookings) or value (smaller bookings).

### Average Booking Value

Revenue divided by bookings. Tells you how much, on average, each customer spends per stay.

### Total Marketing Spend

How much was spent on ads (Meta Ads, eventually Google Ads) during this period.

### Cost Per Booking

Ad spend divided by bookings. If you spent ₹10,000 and got 5 bookings, cost per booking is ₹2,000. Lower is better.

### ROAS (Return on Ad Spend)

Revenue per rupee spent on ads. ROAS of 4.0x means for every ₹1 spent, you earned ₹4. Above 3x is healthy.

### Conversion Rate

Percentage of website visitors who became bookings. 2-3% is typical for hotels. Lower may mean the website needs improvement.

### Device Split

How visitors arrive — mobile vs desktop vs tablet. Most hotel visitors are on mobile. If your mobile share is high, your website MUST work well on phones.

### Bounce Rate

Percentage of visitors who arrived and left immediately without exploring. Lower is better — high bounce rate means content isn't engaging.

**If you only watch two numbers, watch Revenue and ROAS. Revenue tells you whether money is coming in. ROAS tells you whether your marketing is efficient. Together, they tell you almost everything you need to know.**

## 5. Where Your Bookings Come From

This is one of the most important sections. Most hotels never know which marketing channel actually drove their bookings — they just see total numbers. HotelTrack tells you exactly which channel brought each booking.

### The Three Views (Granularity Toggle)

In the Revenue by Source section, you'll see a toggle with three options:

- 1. Source** — High level. Shows: Instagram, Facebook, Google, Direct, Influencer, etc.
- 2. Source + Medium** — More detail. Shows: Instagram Reels, Instagram Stories, Facebook Ads, Google Search, etc.
- 3. Source + Medium + Campaign** — Full detail. Each specific campaign name: "Monsoon Sale", "Diwali Promotion", etc.

### What to Look For

Look for your **top source** — the one bringing the most revenue. This is what's working. Don't stop doing it.

Look for sources with **high spend but low revenue** — that's wasted budget. Talk to your agency.

Look for sources with **surprisingly high revenue from low effort** — that's an opportunity to scale.

**Most useful question to ask your agency:** "I notice Instagram Reels brought █X in bookings last month — can we do more of that?" or "Why is the Diwali campaign showing zero revenue?"

## 6. Commission Saved vs OTAs

Every booking that comes through Booking.com, MakeMyTrip, Agoda, or other OTAs costs you 15-22% in commission. That's real money leaving your business.

Every booking that comes through your own website doesn't pay that commission. That's money **saved**.

**The Commission Saved section shows exactly how much money your direct bookings saved you. This is one of the strongest ways to justify investing in marketing — every direct booking saves you the OTA fee.**

### How the Calculation Works

Your agency sets your average OTA commission rate (default 18%, but yours may differ — ask them to update it). HotelTrack then calculates: **total direct booking revenue × your OTA rate**.

**Example:** If your direct bookings generated ■5,00,000 this month and your OTA rate is 18%, you saved ■90,000 by not paying OTA commissions.

### The Trend Chart

Below the savings number, you'll see a line chart showing monthly savings over time. Watch whether it's trending up — that's evidence your direct booking strategy is working.

### The Honest Note

This calculation assumes those customers **WOULD** have booked through an OTA if they hadn't found your website directly. That's not always true — some might have booked direct anyway. Think of the number as a directional indicator, not a guaranteed savings figure.

## 7. Visitor Journeys

This section shows real, anonymous visitors who came to your website — what pages they saw, in what order, how long they stayed on each, and whether they ended up booking.

### What You'll See

A list of recent visitor sessions. Each row shows when they visited, how long they stayed, how many pages they viewed, where they landed, where they exited, their source, and whether they converted (booked).

Click any session to see the FULL journey — every page they visited in order, with time spent on each, and where they finally left.

### Why This Matters

Look at the **Exit Page** column. If many visitors keep leaving from the same page — say, the booking page or the photos page — that page has a problem. Maybe the photos load too slowly, the booking form is confusing, or there's no clear "Book Now" button.

This is the kind of insight no other tool gives you. Most hotels don't know where their website is losing customers. Now you do.

### Privacy Note

Visitors are shown as anonymous IDs (like "vis\_abc123"), not real names. We don't know who they are personally unless they identify themselves during booking. This protects their privacy while still giving you useful information about behaviour.

## 8. The Booking Funnel

The Funnel Analysis section shows you, across ALL your visitors, where the biggest drop-offs happen between landing on your website and completing a booking.

### The Four Stages

1. **Awareness** — Homepage, About, blog. Visitors discovering you.
2. **Consideration** — Rooms page, photos, amenities. Visitors evaluating.
3. **Intent** — Booking page, date picker, payment. Visitors trying to book.
4. **Booking** — Thank-you page. The booking is complete.

### What the Funnel Tells You

#### Example:

- 1,000 visitors hit awareness (came to homepage)
- 400 reached consideration (looked at rooms)
- 100 reached intent (started booking)
- 5 actually booked

From this, 60% of visitors leave between awareness and consideration. That's a clear problem — maybe your homepage isn't selling the rooms well enough.

And only 5 out of 100 who started booking actually completed it. That's a 95% drop-off at the booking step — almost certainly a problem with the booking form or payment flow.

**The biggest gap in your funnel is where your agency should focus first. Use this section to have data-driven conversations with them about what to fix on your website.**

## 9. Switching Between Marketing Channels

At the top of your dashboard is a dropdown that says "All Channels" by default. Click it and you can switch to view just one channel at a time. Each channel view shows different KPIs that matter for that channel specifically.

### The Channels

|                          |                                                                                                                     |
|--------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>All Channels</b>      | Default — shows everything together. Use for daily overview.                                                        |
| <b>Meta Ads</b>          | Paid Facebook and Instagram ads. Shows spend, clicks, CTR, CPC, ROAS, top campaigns.                                |
| <b>Google Ads</b>        | Paid Google search ads. Currently 'Coming Soon' — Google Ads integration is planned.                                |
| <b>Instagram Organic</b> | Non-paid Instagram — reels, posts, stories. Shows reach, engagement, bookings driven, and your actual recent posts. |
| <b>Facebook Organic</b>  | Non-paid Facebook page. Shows page visits, post reach, bookings.                                                    |
| <b>Influencer</b>        | Bookings from influencer partnerships using coupon codes.                                                           |
| <b>Direct</b>            | Visitors who typed your URL or bookmarked it (no marketing source).                                                 |
| <b>Other</b>             | Visitors from email, WhatsApp, partner sites, or other miscellaneous sources.                                       |

When you click Instagram Organic, you'll also see a "My Instagram Content" table — your actual recent posts ranked by performance. Toggle between "Recent" and "Top Performing" to see which content brings the most traffic to your website.

# 10. Influencer Performance

If your agency runs influencer campaigns for your hotel, this section shows how those campaigns are actually performing — not just in views or likes, but in bookings.

## How It Works

Each influencer is given a unique coupon code (e.g., "PRIYA10"). When a guest uses that code during booking, HotelTrack credits the revenue to that specific influencer.

You'll see a table showing each influencer with: their name, Instagram handle, how many redemptions they drove, and the total revenue they brought.

## Why This Matters

Influencer marketing is hard to measure — most hotels pay influencers and hope something happens. With HotelTrack, you can see exactly which influencer brought what.

### Example:

- Priya — 5 redemptions, ■2,45,000 revenue (paid ■50,000 — ROI of 4.9x)
- Karan — 1 redemption, ■35,000 revenue (paid ■40,000 — ROI of 0.87x)
- Anjali — 0 redemptions, ■0 revenue (paid ■35,000 — ROI of 0)

**Now you know exactly who to keep working with and who to drop.**

# 11. Reaching Your Agency

At the very bottom of your dashboard is a "Contact Agency" button. Tap or click it to expand a card showing all the ways to reach your marketing agency.

## What You'll See

When you expand the card, you'll find:

- **Mobile number** — tap on mobile to dial directly
- **WhatsApp number** — tap to open WhatsApp
- **Email** — tap to open your email app
- **Website** — opens in a new tab
- **Office address**

## When to Reach Out

You don't need to wait for the agency to reach out to you. If something looks off, ask. The whole point of HotelTrack is to make marketing transparent — questions are welcome.

Common reasons to reach out:

- A specific number on the dashboard surprised you
- You want to know more about a campaign you saw
- You want to suggest a new campaign or content idea
- You have feedback about the dashboard itself
- Something looks broken or wrong

## 12. Your Weekly Routine

You're busy running a hotel. You don't have time to stare at a dashboard every day. Here's the minimum-effort routine to stay on top of your marketing without it becoming a job.

### Daily — 2 Minutes

Open the dashboard, glance at the Performance Summary at the top. Set the toggle to "Yesterday". If nothing surprises you, move on with your day.

### Weekly — 10 Minutes

Once a week (Monday morning works well), set the toggle to "Last 7 days". Look at:

- The Performance Summary (read it carefully)
- The KPI cards (especially Revenue and ROAS)
- The top source in Revenue by Source
- The funnel chart — any major drop-offs?

Note 1-2 questions and send them to your agency.

### Monthly — 30 Minutes

Once a month, set toggle to "Last 30 days" and go through the whole dashboard:

- Month-over-month trends in revenue and bookings
- Which channels grew vs which shrunk
- Total OTA commission saved
- Influencer performance — who's working, who isn't
- Any visitor journey patterns that suggest website improvements

This is the conversation to have with your agency monthly: what worked, what didn't, what to try next month.

**You don't need to become a marketing expert. You just need to ask good questions of the people you're paying to handle it. The dashboard gives you the data to ask good questions.**

## 13. Frequently Asked Questions

### How is HotelTrack different from Google Analytics?

Google Analytics shows visits but doesn't tie them to revenue well. HotelTrack tracks the entire journey from ad to booking, shows exactly how much each channel made you, in language a hotel owner can understand. Google Analytics is a tool for analysts. HotelTrack is a tool for hotel owners.

### Why are the bookings here different from what my channel manager shows?

HotelTrack tracks bookings that happen on your WEBSITE. Bookings that happen on OTA sites or directly in your channel manager don't show up here — they show up in those systems instead. HotelTrack focuses on direct, website-driven revenue because that's what your agency can directly influence.

### Some bookings happen by phone. Where are those?

HotelTrack doesn't see phone bookings unless your agency manually enters them. If a significant share of bookings are by phone, ask your agency about logging them weekly.

### Can I see who specifically visited my website?

No — visitors are anonymous (shown as IDs like "vis\_abc123"). You only see WHO booked if they entered their name during booking. This protects visitor privacy.

### Is my data secure?

Yes. HotelTrack is multi-tenant — your hotel's data is isolated from every other hotel using HotelTrack. Other agencies cannot see your data. Other hotels in your agency cannot see yours.

### What if a number on the dashboard looks wrong?

Reach out to your agency via the Contact Agency button. Sometimes discrepancies are due to attribution windows, OTA bookings not being tracked, or short-term data delays. Most of the time it's explainable.

### Can I export the data?

Currently HotelTrack is read-only via the dashboard. If you need exports for tax or accounting purposes, ask your agency — they can pull data for you when needed.

### How often does the data update?

Most numbers update every few hours. Ad spend from Meta updates daily. Bookings update in near-real-time. For the latest, refresh the page.

### My agency is showing me HotelTrack — am I being charged for it?

HotelTrack is paid for by your agency, not you. It's a tool they use to demonstrate marketing performance. You don't pay anything extra for access.

### **Can my staff also have access?**

Talk to your agency. They control access. Typically your front office manager, GM, or revenue manager would also benefit from seeing the dashboard.

## 14. Closing

HotelTrack is here to make your marketing transparent. You don't need to learn marketing to use it. You don't need to understand every chart. You just need to know enough to ask good questions and make better decisions about your hotel's future.

The most important things to remember:

- 1. Read the Performance Summary daily.** 30 seconds. That's enough.
- 2. Trust the trends, not the single days.** A bad day is normal. A bad week is a signal.
- 3. ROAS and Revenue are the two numbers that matter most.**
- 4. Use the data to have better conversations with your agency.** Bring specific questions from the dashboard.
- 5. Direct bookings are gold.** Every direct booking is OTA commission you saved.

**Thank you for using HotelTrack.**

Your agency built this dashboard to be honest with you — even when honesty means acknowledging that something isn't working. That's the foundation of a good marketing partnership.

We hope it helps your hotel grow.

*If you have any questions about how to read your dashboard, contact your agency directly using the Contact Agency button on your hotel dashboard.*
