

# HotelTrack

## Integration Guide

*Step-by-step instructions to connect your hotel's website, Meta Ads, Instagram, and Google Analytics*

### Who this guide is for:

- **Hotel owners and managers** — to understand what's being set up on your behalf
- **Hotel's web developer or technical person** — to install the website tracking code
- **Agency team members** — as a complete onboarding reference

Each chapter is written in plain language. Where technical steps are needed, exact button names and screen labels are provided. Sections labelled (*Technical*) can be skipped by non-technical readers.

# Contents

1. Before You Start — What You'll Need
2. Installing the HotelTrack Snippet on Your Website
3. Connecting Meta Ads with a Long-Lived Token
4. Connecting Instagram (Tester Invite + OAuth)
5. Connecting Google Analytics 4 (GA4)
6. Verifying Everything Works
7. Troubleshooting Common Problems

**Estimated total time: 60-90 minutes for a hotel that has everything ready. Plan for 2-3 hours if any prerequisites (Instagram Business Account, GA4 property, Meta token access) need to be set up first.**

# 1. Before You Start — What You'll Need

HotelTrack connects to four parts of your hotel's online presence. Before you begin, gather the following. If any item below isn't ready, set it up first — otherwise integration steps will fail partway through.

## For Website Snippet Installation

- Access to edit your hotel website's HTML (your web developer or whoever built the site)
- Your hotel's unique **siteld** from HotelTrack (the agency will provide this)
- Knowledge of where your booking confirmation / thank-you page is (the URL)

## For Meta Ads (Facebook + Instagram Ads)

- Admin or Editor access to your hotel's Facebook Business Manager
- Your hotel's Meta Ad Account ID (starts with **act\_**)
- Permission to generate a long-lived access token from Meta

## For Instagram

- Your hotel's Instagram account converted to a **Business Account** (not Personal or Creator)
- The Instagram Business Account linked to your hotel's Facebook Page
- Phone access to the Instagram app to accept a tester invite

## For Google Analytics 4 (GA4)

- GA4 property already set up and tracking your hotel's website (most hotels have this already)
- A Google account with at least **Editor** role on that GA4 property
- That Google account added as a **Test User** on the HotelTrack project (the agency handles this)

**If anything above is missing, talk to your agency first.** They'll either help you set it up or adjust the integration order so you can still get most things connected.

## 2. Installing the HotelTrack Snippet on Your Website

*For the hotel's web developer or technical person*

The HotelTrack snippet is a small piece of JavaScript code that lives on your hotel's website. It silently tracks visitors, captures bookings, and sends data back to HotelTrack. Without this snippet, the dashboard cannot show any visitor or revenue data.

The snippet is lightweight (around 8KB), loads asynchronously (doesn't slow down the page), and collects no personal information about visitors beyond what they share on booking forms.

### What You'll Need

- Your hotel's siteld (provided by your agency — looks like *cmq2667w0000404kypqi8aqeg*)
- Ability to edit your website's HTML — either directly, or through your CMS (WordPress, Wix, Squarespace, Webflow, etc.)

#### STEP 1 — Get Your siteld from Your Agency

Your agency creates a HotelClient record for your hotel inside HotelTrack. Each hotel has a unique siteld — a long string of letters and numbers like *cmq2667w0000404kypqi8aqeg*. Ask your agency to send you this siteld. You'll need it for the next step.

#### STEP 2 — Copy the Snippet Code

Paste this into your website's HTML, replacing **YOUR\_SITE\_ID** with the siteld from Step 1:

```
<script src="https://www.hoteltrack.in/t.js?id=YOUR_SITE_ID" async></script>
```

#### STEP 3 — Add the Snippet to the <head> Section

The snippet must be added to the **<head>** section of **every page** on your website. On most websites, this is done by editing a single layout/template file (header.php, layout.tsx, or similar) — not by editing every page individually.

### Where to Add It for Common Website Builders

**WordPress:** Appearance > Theme File Editor > header.php > paste before `</head>`

**Wix:** Settings > Custom Code > Add Custom Code > paste, set 'Head' position, 'All pages'

**Squarespace:** Settings > Advanced > Code Injection > Header > paste

**Webflow:** Project Settings > Custom Code > Head Code > paste

**Shopify:** Online Store > Themes > Edit Code > layout/theme.liquid > paste in `<head>`

**Custom HTML site:** Edit your main template/layout file and paste before `</head>`

#### STEP 4 — Tell HotelTrack About Your Thank-You Page

When a customer completes a booking, they're typically shown a thank-you or confirmation page. HotelTrack needs to know which URL this is, so it can detect bookings. Common URLs: `/thank-you`, `/booking-confirmation`, `/reservation-success`. Tell your agency this URL — they'll configure it in HotelTrack's settings.

#### STEP 5 — Add the Booking Value to Your Thank-You Page (Optional but Recommended)

For HotelTrack to capture the booking amount, add a **data-ht-value** attribute to any element showing the booking total. Example:

```
<span data-ht-value="15000">■15,000</span>
```

If your booking system already prints the total amount on the thank-you page (most do), wrap that number in the attribute. Replace **15000** with whatever PHP/JavaScript variable represents the booking total. If you can't add this, HotelTrack will fall back to scanning the page text for amount patterns — works for ~80% of cases.

#### STEP 6 — Verify the Snippet Is Working

After adding the snippet, visit any page on your website in a browser. Open **Developer Tools** (press F12 on Chrome). Go to the **Network** tab. Reload the page. You should see a request to `t.js` from `www.hoteltrack.in`. If you see it, the snippet is loaded.

To verify data is being sent, go to the **Console** tab and type:

```
window.HT_DEBUG = true; location.reload();
```

After the reload, you'll see HotelTrack debug logs in the Console showing what's being tracked.

**The snippet is now installed.** Within a few minutes, the agency's HotelTrack dashboard will start showing visitors from your website. Data accumulates over time — give it 24 hours before expecting full reports.

## 3. Connecting Meta Ads with a Long-Lived Token

*For the hotel owner / manager (with agency assistance)*

Connecting Meta Ads lets HotelTrack see your ad spend, impressions, clicks, conversions, and ROAS from Facebook and Instagram ads. You'll do this once per hotel.

### What a Long-Lived Token Is

Meta tokens are like keys that let HotelTrack read your ad data. A normal token expires in 1-2 hours — useless. A **long-lived token** is valid for 60 days, so HotelTrack can keep fetching your ad data without you logging in repeatedly. After 60 days, you'll need to generate a fresh one.

#### STEP 1 — Open Meta Graph API Explorer

Open a new browser tab and go to: **developers.facebook.com/tools/explorer**

Log in with the Facebook account that has Admin or Editor access to your hotel's Facebook Business Manager. If you only have a personal Facebook with no business access, ask your Business Manager admin to do this part.

#### STEP 2 — Select Your Hotel's Meta App

In the Graph API Explorer page, on the right side you'll see a dropdown labelled **Meta App**. Click it. If your hotel has its own Meta App listed, select it. Otherwise, your agency will use the HotelTrack-IG app (App ID: 1202466148612166) — they'll guide you here.

#### STEP 3 — Generate a User Access Token

Click the blue **Generate Access Token** button. A popup will appear asking permissions. Approve the following permissions when prompted:

- **ads\_read** — to read ad performance data
- **ads\_management** — to access ad accounts
- **business\_management** — to access Business Manager
- **pages\_show\_list** — to list your Facebook Pages
- **pages\_read\_engagement** — to read Page metrics

After approval, a long string of letters and numbers appears in the **Access Token** field. This is a short-lived token (expires in 1-2 hours). **DO NOT** paste this into HotelTrack yet — you need to convert it to long-lived first.

#### STEP 4 — Convert to a Long-Lived Token

Copy the short-lived token from Step 3. Open a new browser tab. Paste this URL into the address bar, replacing the placeholders:

```
https://graph.facebook.com/v18.0/oauth/access_token?
grant_type=fb_exchange_token&
client_id=YOUR_APP_ID&
client_secret=YOUR_APP_SECRET&
fb_exchange_token=YOUR_SHORT_LIVED_TOKEN
```

Replace **YOUR\_APP\_ID** and **YOUR\_APP\_SECRET** with the Meta App credentials (your agency provides these — they're sensitive). Replace **YOUR\_SHORT\_LIVED\_TOKEN** with the token from Step 3.

Press Enter. The page will show a response like:

```
{"access_token":"EAAxxxxxxxxxx...", "token_type":"bearer"}
```

The string after *access\_token*: is your **long-lived token**. Copy this entire string (everything between the quotes after *access\_token*).

#### STEP 5 — Paste the Token into HotelTrack

Log in to HotelTrack as the agency. Navigate to:

**Hotel > Manage Integrations > Meta Ads**

Click **Connect Meta Ads**. A form appears with a text field labelled **Long-Lived Access Token**. Paste the token from Step 4. Click **Verify Token**.

#### STEP 6 — Select the Ad Account to Track

After verification, HotelTrack shows a dropdown of all Meta Ad Accounts your token can access. Select your hotel's specific Ad Account (look for one matching your hotel name, NOT a personal account or a different business's account). Click **Save Connection**.

#### STEP 7 — Wait for Initial Sync

HotelTrack now begins fetching the last 90 days of ad data. Initial sync takes 5-30 minutes depending on how much data you have. You can close the browser — sync continues in the background. Within an hour, the Meta Ads channel view in your dashboard will show real spend, impressions, and ROAS data.

**The token expires in 60 days.** HotelTrack will email you and the agency 7 days before expiry, prompting you to generate a fresh token using these same steps. Set a calendar reminder if email reminders aren't reliable for you.

## 4. Connecting Instagram (Tester Invite + OAuth)

*For the hotel owner and agency together*

Instagram connection requires two steps: first the agency invites your Instagram account as a **Tester** on the HotelTrack Meta App, then you accept the invite on your phone, then the agency completes OAuth from a browser. This is more involved than Meta Ads because of how Instagram permissions work — bear with us.

### Prerequisites — Verify Before Starting

- Your Instagram account is a **Business Account** (not Personal or Creator). To check: open Instagram app > profile > menu > Settings and privacy > Account type and tools > Switch account type. If it says 'Switch to Personal Account', you're already Business. Good.
- Your Instagram Business Account is **linked to a Facebook Page**. To check: Instagram app > profile > Edit profile > Page. Should show a connected Facebook Page name. If not, link one first using the Instagram app's settings.

#### STEP 1 — Agency Sends a Tester Invite (Agency does this)

Your agency logs into Meta for Developers at **developers.facebook.com**. Navigates to:

**My Apps > HotelTrack-IG > Roles > Roles**

Scrolls to the **Instagram Testers** section. Clicks **Add Instagram Testers**. Enters your Instagram username (without the @ symbol). Clicks **Submit**.

#### STEP 2 — You Accept the Tester Invite (Hotel owner does this on phone)

Open the **Instagram app on your phone**, logged in as the hotel's Instagram account.

Tap your profile picture (bottom-right). Tap the menu icon (top-right, three lines).

Go to: **Settings and privacy > Apps and websites**

At the top, you'll see three tabs: **Active**, **Expired**, **Tester invites**. Tap **Tester invites**.

You should see **HotelTrack-IG** with an **Accept** button. Tap **Accept**.

**If you don't see the tester invite:** Wait 1-2 minutes after Step 1 and refresh. If still not showing, the username may have been entered incorrectly — ask your agency to verify it matches your exact Instagram username.

### STEP 3 — Open HotelTrack in INCOGNITO Browser (Critical!)

Open a **NEW Incognito/Private browser window**. This is critical — stale Facebook sessions are the #1 cause of OAuth errors at this step. A fresh Incognito window almost always succeeds.

- Chrome: Ctrl+Shift+N (Cmd+Shift+N on Mac)
- Safari: File > New Private Window
- Firefox: Ctrl+Shift+P
- Edge: Ctrl+Shift+N

### STEP 4 — Navigate to HotelTrack and Start Instagram OAuth

In the Incognito window, log in to HotelTrack (the agency does this). Navigate to:

**Hotel > Manage Integrations > Instagram**

Click **Connect Instagram**. You'll be redirected to Facebook to log in.

### STEP 5 — Log In to Facebook with the Right Account

Facebook prompts for login. Use the **Facebook account that manages your hotel's Instagram Business Account**. This is usually the same account that admin's your Facebook Business Manager.

**Common mistake:** using a personal Facebook account that isn't connected to the hotel's Instagram. The OAuth will succeed but no Instagram data will flow because the wrong account was authorised. Double-check this account has access to the right Instagram before proceeding.

### STEP 6 — Approve the Requested Permissions

Facebook shows a screen titled something like **HotelTrack-IG would like to:**

- Access profile and posts from your Instagram account
- Access insights about your account and posts
- (Other permissions listed)

Click **Continue as [your name]**, then approve the permissions. Choose the correct Instagram Business Account when prompted (if you manage multiple).

## STEP 7 — Verify Connection Success

After approval, you're redirected back to HotelTrack. The Instagram integration card should now show:

- **Connected ✓**
- Your Instagram username displayed
- Connection date

If you see an error like *Insufficient developer role* or *App not authorised* — close the Incognito window, open a fresh one, and retry from Step 3. Stale sessions are usually the cause.

## STEP 8 — Wait for Initial Sync

HotelTrack now fetches your Instagram data: profile visits, post performance, recent posts, reach, engagement. Initial sync takes 10-20 minutes. The Instagram Organic channel view in your dashboard will show real data within an hour.

**Multiple hotels? Each hotel needs its own tester invite + OAuth flow. Hotel A's Instagram is added as a separate tester from Hotel B's. The OAuth flow happens once per hotel.**

## 5. Connecting Google Analytics 4 (GA4)

*For the hotel's GA4 account owner and agency together*

GA4 connection gives HotelTrack a parallel view of your website traffic — useful for audience demographics, top countries, and behavioural data that complements HotelTrack's own snippet tracking.

### Prerequisites — Verify Before Starting

- Your hotel has a **GA4 property** set up (not the old Universal Analytics). To check: log in to *analytics.google.com*, top-left dropdown shows your account. If you see 'GA4' or '(GA4)' in the property name, you're good. Universal Analytics is deprecated and won't work.
- The Google account you'll use has at least **Editor** role on the GA4 property. To check: GA4 > Admin (gear icon) > Property Access Management. Your email should be listed.
- That Google account has been added as a **Test User** on the HotelTrack Google Cloud project (the agency does this in Step 1).

#### STEP 1 — Agency Adds You as a Test User (Agency does this)

Agency opens **console.cloud.google.com**. Selects the HotelTrack project from the top dropdown. Navigates to:

##### **APIs & Services > OAuth consent screen**

Scrolls to the **Test users** section. Clicks **+ ADD USERS**. Enters your Google account email (the one with GA4 access). Saves.

Without this step, OAuth will fail with an 'Access blocked' error.

#### STEP 2 — Open HotelTrack in INCOGNITO Browser

Same lesson as Instagram: open a fresh Incognito/Private window. Avoids session conflicts with any other Google accounts you might be logged into.

Log in to HotelTrack (the agency does this in the Incognito window).

### STEP 3 — Navigate to GA4 Integration

In HotelTrack, navigate to:

**Hotel > Manage Integrations > Google Analytics 4**

Click **Connect GA4**. You'll be redirected to Google.

### STEP 4 — Log In with the Correct Google Account

Google prompts for login. Enter the **Google account email that has access to your GA4 property** (the same email added as Test User in Step 1).

**Common mistake:** logging in with a personal Gmail that has no GA4 access. The OAuth succeeds but the property dropdown in Step 6 will be empty.

### STEP 5 — Bypass the 'App Not Verified' Warning

Google shows a warning: **Google hasn't verified this app**. This is expected — HotelTrack is currently in testing mode with Google.

Click **Advanced** at the bottom. Then click **Go to HotelTrack (unsafe)**. The 'unsafe' label is a default Google warning — your data is still encrypted and safe.

If you DON'T see this option, your email isn't in the test users list — go back to Step 1.

### STEP 6 — Approve the Analytics Read Permission

Google shows a permissions screen requesting:

- **View your Google Analytics data** (analytics.readonly scope)

Click **Continue**. This is read-only access — HotelTrack cannot modify or delete anything in your GA4.

### STEP 7 — Select Your GA4 Property

After approval, you're redirected back to HotelTrack. A dropdown appears listing all GA4 properties your Google account can access. Select your hotel's property (look for one matching your hotel name and website URL).

Click **Save Connection**.

## STEP 8 — Verify Connection Success

The GA4 integration card now shows:

- **Connected** ✓
- Your GA4 property name displayed
- Last sync date

If you see an empty property dropdown — your Google account doesn't have access to any GA4 properties. Verify the role under Admin > Property Access Management in GA4.

## STEP 9 — Initial Sync

HotelTrack begins pulling GA4 data: traffic sources, page views, audience demographics. Initial sync of 90 days of data takes 10-30 minutes.

**Note about Google's verification:** HotelTrack's Google Cloud project is currently in Testing mode, which limits the integration to 100 test users. For larger agencies, full Google verification (4-6 weeks process) is required. Not blocking for current usage.

## 6. Verifying Everything Works

After all four integrations are done (snippet, Meta, Instagram, GA4), spend 10 minutes verifying data is actually flowing. Catching problems now is much easier than catching them weeks later when the agency presents to the hotel owner.

### Snippet Verification (Most Important)

1. Visit your hotel's website from any browser
2. Browse 3-4 pages (homepage, rooms page, contact)
3. Wait 5 minutes
4. Open HotelTrack dashboard
5. Go to **Visitor Journeys** section
6. Your session should appear with the pages you visited

If your session DOESN'T appear: snippet is not installed correctly. Recheck Step 6 of Chapter 2.

### Meta Ads Verification

1. Open HotelTrack dashboard
2. Click the Channel dropdown > select **Meta Ads**
3. You should see ad spend numbers (■), impressions, clicks
4. Numbers should match what you see in Meta Ads Manager (allowing for 24-hour sync delay)

If numbers are blank: token may have expired, wrong ad account selected, or no ads running. Check the Meta Ads card in Manage Integrations for an error message.

### Instagram Verification

1. Open HotelTrack dashboard
2. Channel dropdown > **Instagram Organic**
3. You should see profile visits, reach, engagement
4. **My Instagram Content** table at the bottom shows your recent posts

If everything is blank: account is private, not a Business Account, or tester invite wasn't fully accepted. Re-check Chapter 4 Steps 1-3.

### GA4 Verification

1. In HotelTrack dashboard, look for GA4 data sections (audience demographics, top countries)
2. Numbers should match (approximately) what GA4 itself shows
3. Small discrepancies are normal — HotelTrack snippet and GA4 use different tracking methods

### End-to-End Booking Test

The most important verification: simulate a booking.

1. Visit your hotel website with a UTM-tagged URL:  
*yourhotel.com?utm\_source=test&utm\_medium=verify&utm\_campaign=onboarding*

2. Complete a booking through to the thank-you page (use a test discount code if your booking engine supports it, or use a small amount)
3. Wait 10 minutes
4. Open HotelTrack dashboard
5. **Revenue by Source** section should show the booking attributed to *test* source
6. Visitor Journey should show your full session ending at the thank-you page

**If end-to-end booking attribution works, integration is fully successful.** The dashboard is now showing real, attributed revenue data — what hotel owners pay for.

## 7. Troubleshooting Common Problems

### Snippet not firing on website

**Symptom:** No visitor sessions appearing in HotelTrack dashboard.

**Checks:**

- Did you replace YOUR\_SITE\_ID with the actual siteId?
- Is the snippet in the <head> section (not <body>)?
- Is it on every page or just the homepage?
- In browser DevTools Network tab, can you see *t.js* loading from hoteltrack.in?
- Any ad blockers or browser extensions blocking it?

### Meta token says 'Invalid token'

**Symptom:** Meta integration shows error after pasting token.

**Checks:**

- Did you paste the LONG-LIVED token (60-day), not the short-lived one (1-2 hour)?
- Did you copy the entire token without spaces at the start/end?
- Has it been more than 60 days since you generated it? Generate fresh.
- Was the Facebook account used to generate the token an admin of the Ad Account?

### Instagram OAuth error: 'Insufficient developer role'

**Symptom:** Clicking Connect Instagram leads to a Facebook error page.

**Cause:** Stale Facebook session — your browser is logged into a Facebook account that isn't the right one.

**Fix:**

- Close ALL Incognito windows
- Open a fresh Incognito window
- Navigate directly to HotelTrack (don't visit Facebook first)
- Retry the OAuth flow
- When prompted for Facebook login, use the account that manages the hotel's Instagram

### Instagram OAuth succeeds but no data appears

**Symptom:** Instagram says Connected ✓ but Instagram Organic channel shows blank.

**Causes:**

- Instagram account is private (not Business)
- Instagram account not linked to a Facebook Page
- Wrong Facebook account was used during OAuth — one that doesn't actually manage that Instagram
- Tester invite was sent but never accepted (check Apps and websites > Tester invites)

- Account has zero posts/activity in the last 30 days (data is empty, not broken)

## GA4 OAuth 'Access blocked'

**Symptom:** Google shows 'Access blocked: HotelTrack has not completed the Google verification process'.

**Cause:** Your Google email isn't in the HotelTrack Test Users list.

**Fix:** Ask agency to add your email under Google Cloud Console > OAuth consent screen > Test users.

## Booking value not captured

**Symptom:** Conversion shows in dashboard but revenue = ■0.

**Causes:**

- data-ht-value attribute missing from thank-you page
- Currency symbol/format doesn't match HotelTrack's parsing patterns
- Booking value displayed AFTER snippet runs (e.g., React renders the number slowly)

**Fix:** Add data-ht-value explicitly per Chapter 2 Step 5. This is the most reliable method.

## Token expired after 60 days

**Symptom:** Meta integration was working, now shows error or stale data.

**Cause:** Long-lived token reached 60-day expiry.

**Fix:** Repeat Chapter 3 Steps 3-5 to generate a fresh token. Old data is preserved; new data resumes flowing immediately after reconnection.

### Still stuck? Contact your agency.

Most integration issues are 5-minute fixes once someone with HotelTrack experience looks at the specific error message. Take a screenshot of the error, note what step you're on, and reach out.

On the agency side: check HotelTrack's audit log under *Hotel > Settings > Integration Logs* for detailed error responses from Meta, Instagram, or Google.

## End of HotelTrack Integration Guide

*For the full agency reference including dashboard features, attribution models, and the client demo script, see the HotelTrack Agency Playbook.*
