OVERVIEW

Who this guide is for

This is the complete setup guide for HotelTrack, covering both audiences who need to do initial configuration:

FOR HOTELS

If you're a hotel owner or staff member, follow **Part 1**. You'll install a small tracking code on your website (10 min) and connect your Instagram account (5 min). Total time: ~15 minutes. No technical knowledge required — we provide platform-specific instructions for WordPress, Shopify, Wix, and Squarespace.

FOR AGENCIES

If you're a marketing agency managing the hotel's account, follow **Part 2**. You'll generate a Meta long-lived access token (10 min) and add UTM parameters to Meta ads (5 min per ad account). This enables campaign attribution and ad performance tracking on the HotelTrack dashboard.

Both parts are independent. You can complete them in any order, or split the work between hotel staff and agency staff.

What you'll need before starting

- **For hotels:** Access to your website's admin panel, your Instagram account login, and the HotelTrack Site ID provided by your agency.
- **For agencies:** A Meta Developer account, the hotel's Facebook Page admin access, and the connected Meta Ads account ID.

1

Install Website Tracking Snippet

10 minutes · Done once, runs automatically

WHAT THIS DOES

We give you a small piece of code (a snippet) to add to your website. Once installed, it silently tracks which marketing channels bring visitors to your site and records when visitors complete a booking. You can see all of this in real-time on your HotelTrack dashboard. The snippet does NOT slow down your website or change anything visitors can see.

Step 1 Get your tracking code from the agency

Your marketing agency will provide you with a snippet that looks like this:

```
<script src="https://www.hoteltrack.in/t.js?id=YOUR-SITE-ID" async></script>
```

Save this code somewhere you can copy from later — like a Notes app or email draft. You'll paste it into your website in the next step.

Step 2 · Add the code to your website

The exact steps depend on what platform your website is built on. Find your platform below and follow those specific instructions.

If you use WordPress

1. Log into your WordPress admin panel (usually *yoursite.com/wp-admin*)
2. Install the free plugin **Insert Headers and Footers** if you don't have it (Plugins → Add New → search → Install → Activate)
3. Go to **Settings** → **Insert Headers and Footers**
4. Paste the snippet code into the **Scripts in Footer** box
5. Click **Save**

If you use Shopify

1. Log into your Shopify admin
2. Go to **Online Store** → **Themes**
3. Click **Actions** → **Edit code**
4. Open the file *theme.liquid*
5. Find the closing `</body>` tag (near the bottom)
6. Paste the snippet code just BEFORE the `</body>` tag
7. Click **Save**

If you use Wix

1. Log into your Wix dashboard
2. Go to **Settings** → **Custom Code** (under Advanced)
3. Click **+ Add Custom Code**
4. Paste the snippet into the code box
5. Name it **HotelTrack**; Add Code to Pages: **All pages**; Place Code in: **Body - end**
6. Click **Apply**

If you use Squarespace

1. Log into your Squarespace site
2. Go to **Settings** → **Advanced** → **Code Injection**
3. Paste the snippet code into the **Footer** box
4. Click **Save**

If you use a custom website or another platform

1. Ask your web developer or whoever maintains your website to add the snippet just before the closing `</body>` tag of every page. It's a one-line addition.
2. If you don't know who manages your website, share this guide with your marketing agency.

Step 3 Verify the snippet is working

Once the code is added, your marketing agency can verify it from the HotelTrack dashboard. They'll see a status indicator change from **Not Installed** to **Live** within a few minutes.

✓ STATUS SHOWS LIVE

You're done with Part 1. The snippet is now silently tracking visitors and bookings.

■ STATUS STAYS NOT INSTALLED AFTER 10 MIN

The code might not have been saved correctly, or might be on the wrong page. Contact your agency — they can diagnose in 5 minutes.

2

Connect Your Instagram Account

5-10 minutes · One-time setup

WHAT THIS DOES

HotelTrack reads your Instagram account's public performance data — follower count, post engagement, reach, profile views. This appears alongside your ad and booking data on the dashboard. We never post anything, never see your DMs, never make any changes to your account.

Step 1 Verify Instagram account type

Instagram lets HotelTrack read insights data ONLY from **Business** or **Creator** accounts (not Personal accounts). Most hotels already have a Business account — but let's verify:

1. Open the **Instagram app** on your phone
2. Go to your **Profile** (bottom-right tab)
3. Tap the **menu** (three lines, top-right)
4. Tap **Settings and activity**
5. Tap **Account type and tools**

✓ IT SAYS BUSINESS OR CREATOR

Perfect. You can skip ahead to Step 2.

■ IT SAYS PERSONAL

Tap **Switch to professional account** and choose **Business**. This is free, takes 30 seconds, and doesn't change anything visitors see on your profile.

Step 2 Open the HotelTrack dashboard

Your marketing agency will share a unique link with you. The link looks like:

```
https://www.hoteltrack.in/agency/hotel/cm2667w...../integrations
```

Open this link in your browser:

1. Click the link your agency sent
2. You'll see a page with several integrations listed (Meta Ads, Instagram, Website Snippet)
3. Find the **Instagram** card
4. Click the **Log in with Instagram** button (gradient purple/orange)

Step 3 Authorize HotelTrack on Instagram

You'll be redirected to Instagram's official login page. Here's what happens:

1. If you're not already logged in, **log in** with the account you post from
2. Instagram shows a permissions screen: **HotelTrack-IG would like to access your account**
3. Review the permissions (read-only — we cannot post, message, or change your account)
4. Tap **Allow** or **Continue**
5. Wait for the page to redirect back to HotelTrack

DON'T CLOSE THE PAGE

The redirect back to HotelTrack happens automatically. Don't close the tab during this step — wait for it to complete (usually under 5 seconds).

Step 4 Confirm the connection worked

After the redirect completes, you'll be back on the HotelTrack integrations page. You should see:

- ✓ Your Instagram profile picture displayed
- ✓ Your Instagram username shown below the picture
- ✓ A green **Connected** badge in the top-right of the card
- ✓ **Last synced** showing a fresh timestamp

ALL FOUR ITEMS CHECKED? YOU'RE DONE!

Your Instagram account is now connected. HotelTrack will pull your performance data daily. First data appears within 24 hours.

3

Generate Meta Access Token

10 minutes · One-time setup per ad account

WHAT THIS DOES

A Meta long-lived access token gives HotelTrack permission to read your hotel client's Meta Ads spend, campaign performance, and ad-level insights. This token is the foundation for paid ad attribution. Tokens last ~60 days and must be regenerated before expiry.

Prerequisites

- A Meta Developer Account (developers.facebook.com)
- A Meta App created (Business type)
- Your Facebook account added as App Admin
- Hotel's Instagram Professional Account (Business or Creator)
- Hotel's Instagram connected to their Facebook Page

Step 1 Create a Meta App

If you don't have a Meta App already, create one first:

1. Go to **developers.facebook.com** and log in
2. Click **My Apps** in the top navigation
3. Click **Create App**
4. Select **Business** as the app type
5. Enter App Name (e.g., "HotelTrack-MyAgency")
6. Click **Create App**

Step 2 Add required products to the app

Inside your App Dashboard, add these products:

- **Facebook Login for Business** — for OAuth permissions
- **Instagram Graph API** — for Instagram insights data
- **Marketing API** — for Meta Ads campaign data

Click **Save changes** after adding each product.

Step 3 Verify app roles

Verify your Facebook account has Admin role on the app:

1. Open **App Dashboard**
 2. Go to **App Roles** in the left sidebar
 3. Verify your Facebook account appears as **Admin**
 4. If not, click **Add People**, add your account, and accept the invitation from the Facebook app
-

Ste Generate short-lived access token

p 4

Generate a short-lived token via Graph API Explorer:

1. Open developers.facebook.com/tools/explorer
2. At the top right, select **your Meta App** (NOT "Graph API Explorer")
3. Click **Generate Access Token**
4. Log in with your Facebook account when prompted
5. Approve all permissions requested

Required permissions:

- *ads_read* — read ad insights and campaign data
- *business_management* — access business assets
- *pages_show_list* — list managed Pages
- *pages_read_engagement* — read Page engagement data
- *instagram_basic* — read Instagram profile basics
- *instagram_manage_insights* — read Instagram insights

After approval, Meta generates your short-lived token. It looks like: *EAABxxxxxxxxxxxxxxxxxxxxxx*

Ste Get your App ID and App Secret

p 5

From your App Dashboard:

1. Open **App Settings** → **Basic**
2. Copy the **App ID** (a long number like *2092534938335931*)
3. Click **Show** next to App Secret and copy the value
4. Save both somewhere secure — you'll need them next

NEVER SHARE THE APP SECRET

The App Secret is like a password for your Meta App. Never paste it in chat, email, or public documents. Treat it with the same care as your bank credentials.

Ste Exchange for long-lived token

p 6

Short-lived tokens expire in about 1 hour. We need to exchange yours for a long-lived token (~60 days). Use this URL in your browser, replacing the three values:

```
https://graph.facebook.com/v23.0/oauth/access_token?
grant_type=fb_exchange_token& client_id=YOUR_APP_ID&
client_secret=YOUR_APP_SECRET& fb_exchange_token=YOUR_SHORT_LIVED_TOKEN
```

Replace:

- **YOUR_APP_ID** — your App ID from Step 5
- **YOUR_APP_SECRET** — your App Secret from Step 5
- **YOUR_SHORT_LIVED_TOKEN** — the EAAB token from Step 4

FORMATTING RULES

No spaces between parameters. No "%20" encoding. Token must start with *EAAB* (not *IGAA*).
Combine into one single line in your browser.

Step 7 Receive and verify long-lived token

Meta returns a response that looks like this:

```
{ "access_token": "EAABxxxxxxxxxxxxxxxx", "token_type": "bearer", "expires_in": 5184000 }
```

5184000 seconds ≈ 60 days. This is your long-lived access token. Copy the *access_token* value (everything between the quotes after "access_token":).

VERIFY THE TOKEN WORKS

Test it by visiting:

https://graph.facebook.com/me?access_token=YOUR_LONG_LIVED_TOKEN. If successful, you'll see your name and Facebook ID. If you see an error, regenerate from Step 4.

Step 8 Connect in HotelTrack

Now paste this token into HotelTrack:

1. Log into HotelTrack as an agency admin
2. Go to the hotel client → **Integrations**
3. Find the **Meta Ads** card
4. Click **Connect Meta**
5. Paste the long-lived token
6. Click **Validate & Connect**
7. HotelTrack discovers connected Pages and ad accounts — select the right one for this hotel

Within minutes, ad spend and campaign data starts flowing into the dashboard.

Common Errors & Fixes

Error 190 — Invalid OAuth access token

Cause: Token is wrong, expired, or incomplete (most often from copy-paste truncating the token).

Fix: Regenerate a fresh token starting from Step 4.

Insufficient Developer Role

Cause: Your account isn't an Admin, Developer, or Tester on the Meta App.

Fix: Have the App Admin add your account under App Dashboard → App Roles.

Cannot parse access token

Cause: Spaces or encoding in the URL, OR you used an Instagram token (IGAA) instead of Facebook token (EAAB).

Fix: Verify the token starts with EAAB (not IGAA). Remove any spaces from the URL.

4

Add UTM Parameters to Meta Ads

5 minutes per ad account · One-time setup

WHY THIS MATTERS

Without UTM tags on your Meta ads, HotelTrack cannot connect ad clicks to real bookings. The matching layer has nothing to match on, so the Campaign Performance dashboard shows empty data even though Meta is reporting spend. Five minutes of setup unlocks the whole campaign attribution feature.

How the matching works

1. Agency creates an ad in Meta Ads Manager called "Monsoon Promo"
2. You add `utm_campaign={{campaign.name}}` to the ad's URL parameters
3. Someone clicks the ad and lands on the hotel site with `?utm_campaign=Monsoon Promo` in the URL
4. HotelTrack's snippet captures the campaign name in a 30-day cookie
5. If the visitor books, the booking is tagged with that campaign
6. Daily cron matches Meta's "Monsoon Promo" spend with your real bookings
7. Dashboard shows: **Monsoon Promo** → **■45,000 spent** → **12 real bookings** → **True ROAS 5.3×**

Step 1 Open Meta Ads Manager

Go to **business.facebook.com/adsmanager**, log in, and select the ad account whose token is connected to HotelTrack.

Tip: confirm you're in the correct account by checking the account ID at the top. It should match the `act_...` number shown on HotelTrack's Meta integration page.

Step 2 Choose your setup method

You have two options. Pick the one that suits your account:

Option A — Account-level defaults (recommended if available)

1. Look for **Account Settings** or settings gear → **URL parameters**
2. If available, paste the UTM string from Step 3 once

3. Applies to all current and future ads automatically

Option B — Edit each ad individually (if Option A unavailable)

1. Go to **Ads Manager** → **Ads tab** (the bottom level, not Campaigns or Ad Sets)
2. Click an ad → click **Edit**
3. Scroll down to the **Tracking** section (sometimes hidden under "Show more options")
4. Paste the UTM string from Step 3 into the **URL parameters** field
5. Click **Publish** — repeat for each ad

Step 3 Paste the UTM string

Whether you use Option A or B, the UTM string to paste is identical. Copy this exactly:

```
utm_source=facebook&utm_medium=cpc&utm_campaign={{campaign.name}}&utm_content={{ad.name}}
```

The double-curly placeholders are Meta's built-in dynamic variables. Meta automatically substitutes them with real values when each ad runs.

→ `{{campaign.name}}` → Meta substitutes with the campaign name (e.g., "Monsoon Promo")

→ `{{ad.name}}` → Meta substitutes with the ad name (e.g., "Monsoon Reel Variant A")

IMPORTANT

Type the placeholders **exactly as shown**, including the double curly braces. Don't modify, translate, or wrap them in quotes. Meta only recognizes them in this exact format.

Step 4 Verify it's working

Quick test to confirm Meta is auto-tagging correctly:

1. In Ads Manager, click the preview link on one of your edited ads (or visit the live ad on Facebook)
2. Click through to the landing page as if you're a visitor
3. Look at the URL in your browser's address bar
4. It should now contain
`?utm_source=facebook&utm_medium=cpc&utm_campaign=YourCampaignName...`

✓ SUCCESS

If you see UTM tags in the URL, Meta is auto-tagging every click. HotelTrack's daily cron will start producing campaign-attributed data at 2am UTC tomorrow.

CAVEAT — ATTRIBUTION ONLY WORKS GOING FORWARD

Ads that ran BEFORE you added UTM parameters cannot be retroactively attributed. Their clicks arrived without UTM tags. Historical Meta spend still appears on the dashboard, but as "Direct / Unattributed". When demoing to hotels, set expectations: "Real attribution data starts from the day we add UTM tags. The first 2-4 weeks will be partial."

Troubleshooting & FAQs

Reference material for common issues

Troubleshooting Common Issues

Snippet shows 'Not Installed' after I added the code

Most often: the code was added but not saved, or added to the wrong page (only homepage, missing /book page). Ask your agency to verify which pages have the snippet.

Instagram OAuth completes but card stays 'Not Connected'

Browser may have blocked the redirect, or your Instagram account is still set to Personal. Try in incognito with a Business/Creator account.

Meta token validation fails with 'Invalid access token'

Token may have been truncated during copy-paste. Regenerate from Graph API Explorer, copy the entire string at once.

Campaign Performance dashboard shows empty

Most often: UTM parameters not yet added to Meta ads. Complete Part 2.2 of this guide. Data starts appearing 24 hours after UTM setup.

Dashboard shows wrong currency or formatting

Check the hotel's locale setting in HotelTrack admin. Default is  (INR) but can be customized per hotel.

Frequently Asked Questions

Q: Will the snippet slow down my hotel's website?

No. The snippet loads asynchronously (in the background) and is under 10KB — smaller than a single image on your homepage. It has no measurable impact on page load speed.

Q: Can HotelTrack see my Instagram DMs or post on my behalf?

No. We have read-only access to public insights only. We cannot read messages, post content, comment, change your bio, or perform any action on your account.

Q: What if the hotel wants to disconnect later?

For Instagram: open Instagram app → Settings → Apps and websites → Active → tap HotelTrack-IG → Remove. For website snippet: just delete the code from your website. Both take 30 seconds. We immediately stop syncing data.

Q: Is the data secure?

Yes. All tokens are encrypted at rest using AES-256. We never share your data with third parties. Data deletion can be requested anytime via support@hoteltrack.in.

Q: What if the hotel changes their Instagram password?

Your password is never shared with HotelTrack. We use Instagram's official OAuth system. Changing your password doesn't affect the connection — you only need to reconnect if you explicitly revoke our access from Instagram's settings.

Q: How often does Meta data refresh on the dashboard?

Meta Ads data syncs once daily at 2am UTC (7:30am IST). Instagram organic data syncs daily at 3am UTC. The website snippet captures visits and conversions in real-time (instant).

Q: What happens when a Meta token expires (after 60 days)?

HotelTrack alerts you via email 7 days before expiry. You generate a fresh token following Step 4-7 of Part 2.1 and paste it back into the Meta integration card. Historical data is preserved.

Q: Can multiple agencies manage the same hotel?

Currently each hotel client has one agency owner. If a hotel switches agencies, the new agency receives transfer access from the old one.

NEED HELP?

Email support@hoteltrack.in with your hotel name and a description of the issue. Our team responds within 24 hours during business days (Mon-Fri, 10am-6pm IST). For urgent issues, contact your marketing agency — they have direct access to diagnostic tools and can usually resolve issues in minutes.
